Van50 Pipeline — Clustered Dimension Evidence Matrix (0XX – 8XX Standard)

Autonomous 6-Stage Discovery & Verification Pipeline • Archetype-Aware Cultural Events & Outings ≤ $50 CAD

Architecture: Clustered Multi-Stage Pipeline (100% Native Cognitive AI)
Taxonomy: 11 Cultural Archetypes • 9 Clustered Dimension Families
Status: Architectural Proposal Specification • D001 Event Name Standard

PIPELINE AUDIT STAGES (6-STAGE AUTONOMOUS FLOW)

Discovery, link upgrading, cart verification, enrichment & publishing

1A `calendar_harvester.js` **Schedule Harvester** — Discovers candidate events, performance dates, curtain times, and recurrence rules from venue calendars, platform feeds & discovery sources into `layer_schedules.json`.

1B `tier1_hunter.js` **Link Tier Hunter** — Automatically inspects interactive ticketing buttons, embeds, and redirects to locate direct Tier 1 checkout carts (`candidate_tier1_url`) rather than generic calendar hubs.

2 `event_batch_qc.js` **Live Box Office QC** — Headless Chromium agent (Stagehand); navigates live carts, increments quantities, verifies fees + 5% GST (enforcing ≤ $50 CAD cap), and captures cart keyframes into `layer_box_office.json`.

3 `enricher.js` **Semantic Enricher** — Cognitive NLP agent; normalizes production titles, extracts performer lineups, classifies 11 cultural archetypes, extracts age limits, and crafts concise synopses into `layer_editorial.json`.

4 `venues.json / accessibility.js` **Venue & Accessibility** — Facility validator; verifies physical Metro Vancouver street addresses, geocodes GPS coordinates, maps transit waypoints, environment type, and physical accessibility amenities.

5 `compile_catalog.js` **Compiler AI Publisher** — Sole authorized publisher; arbitrates multi-layer evidence, enforces budget & geographic invariants, auto-rolls recurring showings, assigns permanent IDs, publishes to `events.json`, and syncs `data.js`.

STORAGE ARCHITECTURE & PERSISTENCE FILES

Staging layers, core master registries, evidence proofs & web export

`layer_schedules.json` **Harvested Schedules** — Intermediate staging layer for raw event schedules, multi-day showings, door/curtain times, and recurrence rules discovered by Stage 1A.

`layer_box_office.json` **Box Office Evidence** — Intermediate staging layer for live verified cart prices, base fares, itemized fees, taxes, booking protocols, and cart proof paths from Stage 2.

`layer_editorial.json` **Editorial Metadata** — Intermediate staging layer for normalized titles, performer lineups, archetype tags, age limits, and editorial blurbs from Stage 3.

`venues.json` **Physical Venue Registry** — Canonical ground-truth registry for physical Metro Vancouver venue facilities, civic street addresses, GPS coordinates, operating hours, and amenities.

`events.json` **Master Catalog** — Master active catalog published exclusively by Compiler AI; contains verified cultural events meeting all budget (≤ $50 CAD) and quality criteria.

`manual_review_queue.json` **Quarantine Queue** — Triage review queue holding candidate cards that fail fatal dealbreaker gates, exceed price ceiling, or await curator policy decisions.

`archived_events.json` **Lifetime Event Archive** — Permanent historical archive preserving concluded, cancelled, sold-out, or expired events with immutable registration IDs (`Event_Num_Perm`).

`proofs/*.webp` **Visual Proof Anchors** — High-resolution keyframe captures of checkout carts, hero headers, and venue signage serving as immutable visual proof.

`data.js` **Frontend Web Export** — Serialized JavaScript dataset synced from `events.json` by Compiler AI for instant zero-dependency client-side web application loading.
